Short intro

My name is Georgi, but all my friends call me Jojo (it's easier to pronounce correctly). I have studied in a school related to programming which has developed my thinking in that sphere. In my free time I like to play sports and board games. I'm quite a big "rule shark" when it comes to them...

Week 1

	<ol style="list-style-type: none">1. This week was really good for settling in and getting used to my new routine. I had a good time refreshing my memory with the tasks given - the figma, flowcharts, Fontys profile and python tasks. I didn't find difficulties with almost anything this week. (For evidence I'll include all my work into the weekly submission with this Pep.2. On friday I talked with Faruk about my progress in Python. I showed him my completed tasks and he was happy with their completion and implementation and gave me the feedback to try new and unknown solutions, which will enlarge my knowledge pool in Python. This was a really positive interaction for me since I was wondering what to do.3. I really enjoyed using my creativity this week, there wasn't a task or question on which I was pressured to answer in a certain way. I had the freedom to use my imagination as I pleased. You could say I wasn't as professional as someone could be, but I would say that I was teambuilding...

Week 2

	<i>Key take aways of this week</i>
	<ol style="list-style-type: none">1. This week I was able to have some fun playing around with the given html tasks. I thought my work 'perfect' (as much as it can be) but the feedback from Mehrzad made me reconsider - "you have a nice page, However, some functions are missing... For the next time, please start with required elements/expectations and only when you meet them, You can go further and deliver more. ", this was really helpful feedback with which I was able to fix my issue in the code and achieve more.2. On Wednesday I had fun doing research with a 'random' group of classmates on a new topic. The research by itself isn't a complicated job for me nor the presentation but I enjoyed working in a new team with open minded people.3. Again on Wednesday I was really excited when a topic by my choice was permitted to be the research topic for my project in October - "Does Spotify have a dark side?". (All the evidence with flowcharts / python code and more will be submitted with the PEP)

Week 3

<i>Key take aways of this week</i>	
	<p>1. This week was quite a recap week for me, almost every assignment and lesson this week has been taught to me before. But this isn't a bad thing, I got to see different takes on the way some topics are being taught - for instance the Networking pt1 was quite nothing the way I've been told this stuff, though I'm not sure this is my favorite way...</p> <p>2. On Tuesday the lesson by Mehrzaad about finding a job was really good and helpful, it really gave me more insight on how to progress with this task in the near future.</p> <p>3. I had a blast making a sellings pitch to my figma game. The preparation wasn't the best part but the presentation was quite fun. I'm happy to say that I successfully found players/investors in my product and in other words I did sell my product :)</p> <p>4. I'm having a good time researching about my topic for October. It turns out there are a lot of shady things about Spotify...</p>
